

**Inspiration** along with associates and network partners have over the years evolved an ecology sensitive architecture, technology and planning concepts more suitable to third world, especially Indian conditions, in the context of global warming and climate change.

These emphasize integrated approach in

- use of suitable engineered combinations of traditional and modern building materials in construction
- bioclimatic design to optimize lighting, heating, ventilation and air-conditioning
- relevant renewable energy applications where feasible
- total water management
- solid and liquid waste management
- town planning concepts balancing economy and ecology
- use of crafts to enhance structure and interiors
- landscaping with predominant local species of trees and plants

to bring about a balance in comfort, economy and a contemporary eco-friendly ambience in your buildings and surroundings...
